FORTINET.

Security • Performance • Cost • Flexibility

Fortinet® is the pioneer and leading provider of consolidated network security solutions that protect your network against today's constantly changing threats. Fortinet provides end-to-end security solutions from the network core to the endpoint for the world's largest organizations, including global enterprises, service providers, and government agencies. We also protect small and medium businesses, branch offices, and regional locations. Fortinet offers an innovative security platform that incorporates the essential security applications and network services required to protect your environment, regardless of size. Fortinet delivers

- Improved security with a comprehensive, consolidated security solution
- Increased performance with custom ASIC-accelerated hardware
- Reduced total cost of ownership by integrating best-of-breed security applications into a single device and simplifying your network

Fortinet network security solutions include a range of high-end chassis based systems, appliance-based solutions, virtual appliances, and management and reporting tools. These capabilities allow you to protect your critical assets cost-effectively while delivering unparalleled flexibility in deployment.

Fortinet is the only unified threat management solutions provider that owns all of its technology. We built Fortinet solutions from the ground up to integrate multiple levels of security protection—including firewall, antivirus, intrusion prevention, application control, VPN, antimalware, Web filtering, antispy and traffic shaping—providing customers a way to protect against multiple threats today and into the future.

The FortiGate® family of consolidated security systems range in performance and physical features to meet the requirements of any sized organization. Additionally, Fortinet delivers a complete line of products that enable network managers to control, monitor, and operate networks simply and powerfully:

- FortiAnalyzer™ Appliances—Centralized logging and reporting that securely aggregates and analyzes log data from multiple Fortinet products
- FortiManager™ Appliances—Centralized command and control, configuration management and monitoring solution
- FortiMail™ Appliances—An enterprise-class family of specialized email security solutions providing antispy and antivirus protection
- FortiWeb™ Appliances - An enterprise class of Web application firewalls protection web-based applications and data

The Fortinet Advantage:

Fortinet's purpose built hardware and software provide industry-leading performance for the most demanding networking environments. Our solutions provide the visibility you need to detect hidden threats within legitimate content, even from trusted sources and authorized applications.

FortiASIC™ Purpose-Built Security Acceleration

We developed our integrated architecture specifically to provide extremely high throughput and exceptionally low latency. Our unique approach minimizes packet processing while accurately scanning the data for threats. Custom FortiASIC™ processors deliver the power you need to detect malicious content at multi-Gigabit speeds. Other security technologies cannot protect against today's wide range of content- and connection-based threats because they rely on general-purpose CPUs, causing a dangerous performance gap. FortiASIC processors provide the performance you need to block emerging threats, meet rigorous third-party certifications, and ensure that your network security solution does not become a network bottleneck.

FortiOS™ Operating System: Developed for Security

We created the FortiOS operating system specifically to offer maximum performance and protection while reducing complexity in your networking environment. FortiOS gives you the flexibility to deploy as much or as little network and security technology as you need: Firewall, IPS, Antivirus, Antispam, IPsec and SSL VPN, Application Control, WAN Optimization, DLP, SSL Inspection, full feature routing, complete logging and auditing capabilities for forensic analysis, granular multi-tenant Virtual Security Domain (VDOM) support, and a complete command line interface (CLI). We develop all our own technology, meaning there are no third party software applications included that could lead to a vulnerability. It is Common Criteria Certified EAL 4+ and Federal Information Processing Standard (FIPS) 140-2 validated.

Global Threat Research and Updates

Our FortiGuard® Labs' global team of threat researchers continuously monitors the evolving threat landscape. The team of over 125 FortiGuard Labs researchers provides around the clock coverage to ensure your network stays protected. It delivers rapid product updates and detailed security knowledge, providing protection from new and emerging threats.
